

## Improve Centrifuge Performance with Automatic Lubrication

## FEATURES & BENEFITS

- Significantly increases rotating bowl and support bearing life.
- No sophisticated controls required. Fully stand alone with on-board control or ties into existing controls.
- Optional enclosures available for harsh conditions.
- Dramatically reduce lubricant consumption.
- Optional low level beacon warning light.

*Adding a Bijur Delimon lubrication system increases equipment life by decreasing wear on vital components. Automatic lubrication systems safely and continuously supply lubricant while your machine is running.*

# PROVEN QUALITY, RELIABILITY AND ACCURACY.

## Automatic Air/Oil Lubrication for the Rotating Bowl

- The AirMax pump is a complete solution in an economical and compact package including the pumping unit and an integrated air/oil injection system.
- Precise delivery eliminates over lubrication.
- Increased output and production uptime.
- Prevents bearing contamination.
- Custom systems/enclosures available.
- Optional monitoring capabilities available. Know each bearing is getting lubricated.

## Automatic Grease Lubrication for the Support Bearings

- Stationary equipment are exposed to tough environments including water, weather, chemicals and continuous operation. Utilizing automatic lubrication increases uptime by protecting bearings and other components.
- Automatic lubrication can prevent corrosion in equipment exposed to outside elements by preventing water from forming in the bearing.
- Lubricate while your equipment is running and increase safety by eliminating the need for operators to be within the work zone.
