

Reduce Downtime & Maintenance Costs on Your Plastic Injection Molding Machine

STATE OF THE ART AUTOMATIC GREASE LUBRICATION SYSTEMS

- Minimize downtime and reduce maintenance costs by keeping all machine axes and spindles running at peak levels.
- Easily replace your existing systems and their hard to find spare parts and components. Numerous configurations and additional mounting holes allow increased compatibility with competitor products.
- Low level switch for fail safe operation.
- Convenient terminal block provides fault-free electrical connections.

Adding a Bijur Delimon lubrication system increases equipment life by decreasing wear on vital components. Automatic lubrication systems safely and continuously supply lubricant while your machine is running.

PROVEN QUALITY, RELIABILITY AND ACCURACY.

MultiPort II

The MultiPort Lubricator is an electrically driven multiple outlet lubrication unit designed primarily for use with progressive divider valve systems to accurately control the amount of grease and to monitor system performance via an integral controller.

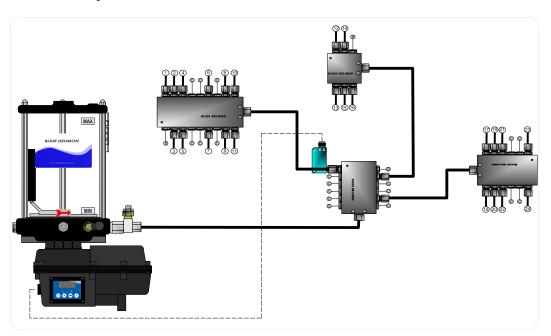

MultiPort II Lubricator

PVBM Progressive Valve

The corrosion resistant PVBM Divider Valve dispenses lubricant to as many as 20 outlet lines at operating pressures up to 3600 psi. This compact valve can be located near the lube points to accurately dispense grease automatically to the entire machine. Valves are available with cycle indicator pins to provide visual confirmation of system operation. In addition, the cycle pin can be fitted with a switch to provide electrical feedback to a system controller.
