

Electric Barrel Pumps - EBP & EBPD

Grease & Fluid Grease

GENERAL

Farval's AC or DC Electric Barrel Pumps can replace the air or hydraulic operated pumps now used for lubrication systems on mobile or stationary equipment. Installation is cleaner - no air or hydraulic lines to install/leak. Simply wire into the machines power supply. Pressure rated to 300 bar (4350 psi). EBP Will fit original refinery 120 and 400 lb drums (50kg & 185kg). Optional drum covers and follower plates are available. EBPD will fit 90 & 60 lb containers.

OPERATION

The pump end (bottom) consists of a hardened steel bushing, through which the piston runs. As the piston strokes down, grease is pushed past the check valve ball and out through the extruded discharge holes in the pump stem. As the piston strokes up, the check valve prevents drawback, and a vacuum is created inside the bushing. When the piston uncovers the suction holes in the bushing, another charge of grease is drawn in through the suction ports on the bottom of the stem and into the bushing. The cycle then repeats.
