The Lubrication Solution for Concrete Pump Trucks

STATE OF THE ART LUBRICATION SYSTEMS FOR CONCRETE PUMP TRUCKS

- The system greases every point while the concrete pump truck is in operation and maintains a constant barrier at bushings preventing dust and dirt from entering wear surfaces.
- Increased safety as there is no need to crawl under or over equipment to service hard-to-reach lubrication points.
- Gain 30 minutes or more of operating time per day with an R.O.I. of less than 12 months.

Adding a Bijur Delimon lubrication system increases equipment life by decreasing wear on vital components. Automatic lubrication systems safely and continuously supply lubricant while your equipment is running.
**MultiPort II**

The MultiPort II Lubricator is an electrically driven multiple outlet lubrication unit designed primarily for use with progressive divider valve systems to accurately control the amount of grease and to monitor system performance via an integral controller.

**PVBM Progressive Valve**

The corrosion resistant PVBM Divider Valve dispenses lubricant to as many as 20 outlet lines at operating pressures up to 3600 psi. This compact valve can be located near the lube points to accurately dispense grease automatically to the entire machine. Valves are available with cycle indicator pins to provide visual confirmation of system operation. In addition, the cycle pin can be fitted with a switch to provide electrical feedback to a system controller.
