

Window Units

Flush Mounted, Glass Window

General

Window units are virtually flush-mounted. One piece construction features a corrosion resistant plated brass frame, holding a clear glass window, with an oil proof sealing gasket.

Standard Type

Used to indicate the level of non-corrosive liquid in reservoir. A clear window together with a reflecting background provides good visibility.

Level Type

Used to indicate a definite level of non-corrosive liquid in reservoir. Wording on the back of a clear window together with a reflecting background provides good visibility.

Open Type

Has no reflecting background, thus permitting observation of liquid flow or internal parts through a clear window.

| A (I.D.) | B (O.D.) | C (Width) | Type | Part # |
|----------|----------|-----------|----------|--------|
| 5/8" | 7/8" | 19/64" | Standard | B5184 |

Installation

All units are pressed into a reamed hole in the wall of the reservoir. To ensure tightness, cover the surface of the hole with a thin coat of heat-resisting sealing material before pressing window unit into place. The maximum operating temperature is 180°F. Hole diameters according to window size are given below.

How to Order

When ordering, specify by name and part number, e.g. Window Unit, Standard Type, Part #B5184.
