

Product description
Flow control
unit KE-B

PRODUCT CHARACTERISTICS

- Working pressure max. 120 bar
- Flow rate per circulation 1.6 cm³
- Lubricant grease and oil
- with motion indicator
- Material: steel

FUNCTION

The lubricant flow through the unit invariably is causing to force moving the two measuring pistons. A locking pin between the two pistons ensures that only one piston can move at a time. The movement of the two pistons is comparable to that of a progressive divider arrangement with 4 outlets which are internally combined. One of either piston actuates the integral micro-switch via pin. Any signals deriving from the micro-switch may be electronically recorded by relays and ancillary equipment. A unit's full cycle is equal to a 1.6 cm³ flow rate.
